Summary

Full Stack Developer with 4.9 years of experience building enterprise web applications, RESTful APIs, third-party integrations, booking platforms, payment integrations, and database-driven systems. Strong hands-on experience with C#, ASP.NET Core Web API, React.js, JavaScript, SQL Server, webhooks, and full API lifecycle development. Experienced in integrating 10+ third-party travel, mobility, ticketing, car hire, flight, eSIM, and payment APIs, including availability, reservation, booking, cancellation, status synchronization, and webhook-based database updates. Skilled in developing scalable backend services, React functional components and Hooks, API-driven user interfaces, background/utility executables, and production support across UK and Germany environments.

Technical Skills

Frontend: React.js, React Hooks, Functional Components, JavaScript, HTML5, CSS3, jQuery, Redux, React Native

Tools: Git, GitHub, Postman, Visual Studio, VS Code, SQL Server Management Studio, ClickUp

Integration: Third-Party API Integration, Webhooks, Authentication, Availability, Reservation, Booking, Cancellation, Status Updates

Database: Microsoft SQL Server, SQL Queries, Stored Procedures, Joins, Indexing, Query Optimization, RDBMS

Backend: C#, .NET, ASP.NET Core, RESTful Web API, LINQ, OOPS, JSON, API Integration

Payment: myPOS Payment API, Handpoint Payment API, POS Payment Integration, Payment Status Handling

Travel APIs: Enterprise Car Hire, Flight API, Big Bus, London Theatre, Golden Tours, Musement, Tootbus, Distribusion, Core eSIM, Heathrow Express, Oyster Card, London Pass

Other: :Windows, API Testing, Debugging, Production Support, Email Queue Processing, Static Data Processing

Professional Experience

Webstorm Information Technology

Mar 2022 – Present

Full Stack Developer

- Develop and maintain enterprise web applications using React.js, JavaScript, C#, ASP.NET Core Web API, and SQL Server across end-to-end application workflows.
- Design, develop, test, and integrate RESTful APIs for third-party travel and mobility providers, covering availability, reservation, booking, cancellation, pricing, and status-management workflows, cutting new-supplier onboarding time by approximately 30
- Integrated 10+ third-party APIs across car transfers, bus and coach services, theatre, tours and activities, eSIM, rail, London Pass, Enterprise Car Hire, and flight services.
- Built backend API workflows in C# and ASP.NET Core Web API for transforming supplier requests/responses, validating data, handling errors, and persisting transactional information in SQL Server.
- Implemented webhook-based status updates to synchronize booking and transaction status from external providers into internal database tables and application workflows.
- Enhanced utility/EXE applications for third-party static-data downloads and processing, automating a previously manual data-refresh process and reducing processing time from several hours to under 30 minutes per run.
- Developed EmailQueue executable workflows to process booking and cancellation emails for UK and Germany (DE) server environments.
- Merged payment device/provider APIs including myPOS and Handpoint, supporting payment contribution, transaction handling, and payment-status workflows.
- Improved responsive React websites using functional components, React Hooks, Redux, reusable components, and API-driven state management for customer-facing travel and booking journeys.
- Worked with SQL Server for complex queries, stored procedures, joins, data validation, indexing, and query optimization supporting high-volume booking and integration workflows.

- Collaborated with QA and cross-functional teams to troubleshoot production issues, debug API failures, validate integrations, and deliver reliable releases.

Webstorm Information Technology

Nov 2021 – Mar 2022

Software Engineer Trainee

- Developed React.js dashboards using functional components and Hooks, consuming REST APIs to display real-time customer and operational data.
- Built an e-commerce web application using React.js and REST APIs, focusing on reusable UI components, API integration, and responsive user experience.
- Supported debugging, API testing, SQL data validation, and application enhancements during the development lifecycle.

Key Projects & Contributions

Third-Party Travel & Mobility API Integration:

Mar 2022 – Present

- Integrated and maintained 10+ external APIs for Big Bus, London Theatre, Golden Tours, Musement, Tootbus, Distribution, Core eSIM, Heathrow Express, Oyster Card, London Pass, Enterprise Car Hire, and flight services.
- Implemented end-to-end API flows for availability, reservation, booking, cancellation, supplier response mapping, error handling, and status synchronization.
- Enhanced webhook consumers to receive external status events and update internal SQL Server records reliably.

WKG Gateway – Booking & Reservation Web API:

July 2022 – Present

- Developed C# ASP.NET Core Web API services in the WKG Gateway application for availability, reservation, booking, cancellation, and supplier integration workflows.
- Applied request/response transformation, validation, database persistence, exception handling, and integration logic for multiple suppliers.

Static Data Download & Availability EXE Applications:

July 2022 – Present

- Expanded background/utility executable applications to download third-party static data, process supplier files/responses, and update availability-related information in backend systems.
- Designed repeatable data-processing workflows with validation and error handling for production environments.

EmailQueue – Booking & Cancellation Notifications:

Mar 2022 – Present

- Improved EmailQueue executable applications for processing booking and cancellation email notifications across UK and Germany server environments.
- Executed queue-based processing and backend status handling to support reliable operational communication.

Payment Device & Provider API Integration:

July 2022 – March 2026

- Blended myPOS and Handpoint payment APIs for payment contribution and transaction workflows.
- Enforced payment request/response handling, status processing, and database updates to align payment state with booking transactions.

React Travel & Booking Websites:

July 2022 – Present

- Developed React.js websites using functional components, Hooks, Redux, reusable components, and REST API integrations for car transfers, Uber, hotel bookings, theatre, tours, activities, bus tickets, London Pass, Enterprise Car Hire, eSIM, and other travel services.
- Built responsive and user-friendly interfaces with API-driven availability and booking experiences.

React Native Mobile Application:

July 2022 – July 2024

- Expanded a cross-platform React Native mobile application for Heathrow Express ticket ordering, Oyster Card, and London Pass ticket services.
- Incorporated secure payment and POS-related workflows while consuming backend REST APIs.

Education

Anna Universtity, University College of Engineering, Dindigul

Aug 2016 – Oct 2020

- Bachelor's Degree in Electronics and Communication Engineering

Bharathi Matric higher Secondary School, Thammampatty

July 2014 – May 2016

- State Board of secondary Education
